

## Magnetic filter grids of hard ferrite or NdFeB

Magnetic filter grille made of NdFeB, round, stainless steel housing made of 1.4301, suitable for pipe systems, bolted design

Article number	D mm	H mm	Temperature °C	Number of magnetic filter bars	Diameter magnetic filter bars
MS100NdSo00rh01	100	30	80	2	25
MS150NdSo00rh01	150	30	80	3	25
MS200NdSo00rh02	200	30	80	4	25
MS250NdSo00rh01	250	30	80	5	25
MS300NdSo00rh01	300	30	80	6	25
MS350NdSo00rh01	350	30	80	7	25
MS400NdSo00rh01	400	30	80	8	25

### APPLICATION:

Filter systems can be used to easily filter iron particles and iron filings caused by abrasion or contamination out of the material. The filters work reliably and are virtually wear-free. This extends the service life of the production system and prevents the risk of costly maintenance and cleaning work. In addition, these round filter systems are bolted, making them easy to dismantle and clean.

### PRODUCT NOTE:

The standard version of our filter systems is not designed for use in humid environments. Suitable applications are e.g. wood, plastic or recycling plants.

No stock items, customised production

As an alternative to the standard version, we also offer customised solutions:

- " Seal-welded version for use in liquids (e.g. water, coolant)
- " High-quality stainless steel cover for use in food production

" Increase in maximum operating temperature up to 350°C possible

" Production of customised, non-standardised sizes
