PRODUCT INFORMATION:

Damaged surfaces due to conventional magnets? Our **rectangular magnet systems with rubber coating** offer protection against scratches and discolouration thanks to the TPE rubber coating. Enjoy maximum flexibility thanks to form-fit positioning and optional double thread. These **SQUARELINE** systems are equipped with **sturdy threaded studs**.

In contrast to conventional pot magnet systems, our **SQUARELINE** magnet systems offer a deeper-acting magnetic field thanks to the embedded metal element. This allows you to bridge larger gaps and use your magnet systems more flexibly. The TPE rubber coating also ensures a secure hold and protects your surfaces from damage.

As an alternative to the standard version, we also offer customised solutions:

- " Other colours for the rubber coating
- " Harder or softer rubber coating
- " Higher adhesive force

* The forces have been determined at room temperature on a polished plate made of steel (S235JR according to DIN 10 025) with a thickness of 10 mm (1kg~10N). A deviation of up to -10% from the specified value is possible in exceptional cases. In general, the value is exceeded. The type of application (installation situation, temperatures, counter anchors, etc.) sometimes influence the forces enormously. The values given are for orientation purposes. Let our experts advise you.
