

# NEW PRODUCT

## Suction cup magnet systems

 VAKULINE

## Fastening solutions are our expertise.

With our comprehensive know-how and in-depth development expertise in magnets and magnet systems, we at BRUGGER are the perfect partner for customized special solutions: From the modification of existing products and systems to completely new developments, we offer the full range of options - with the added benefit of personal advice.

### **Product information:**

There are 3 different diameters available. Diameters ( 180 mm - 125 mm - 90 mm) - each with either an internal or external thread

The clever combination with a soft suction cup creates an additional vacuum - this provides additional protection for the magnetic system if, for example, the magnetic contact is briefly lost due to a jerky movement.

High corrosion resistance thanks to special coating of the metal parts - it has been proven in the salt water spray test that no red rust is formed

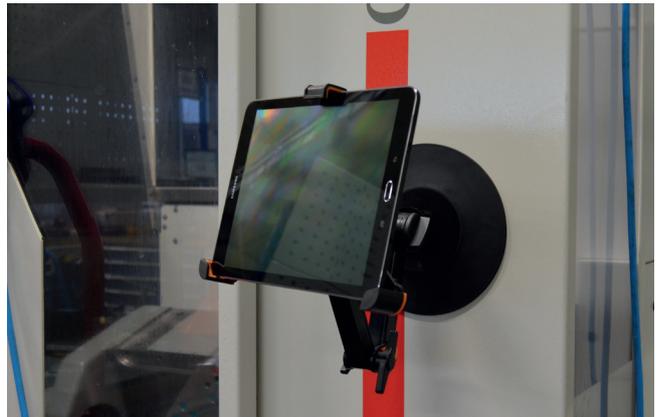

### **Advantages:**

- vakuLINE suction cup magnets are EXTREMELY adhesive
- The vacuum prevents or delays the tilting moment
- No scratches on sensitive surfaces
- No abrasion
- High temperature resistance
- Very high forces even with low sheet thickness

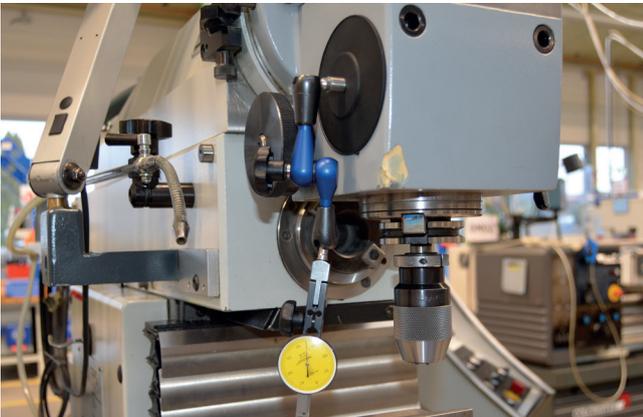

## Magnetized by ideas - fascinated by possibilities.

Fixing pipes directly to steel beams

Mounting of operating elements directly on the machine

Fastening measuring devices to the machine housing

Mounting components on machines

Various standard parts can be attached to the thread

Use in the camping sector - attachment to the vehicle
